

[Insert title of invention]On-Demand Electronic Documents Processing and Sharing

Abstract

The present invention is an apparatus, method, and computer program product for on-demand document processing and sharing. A digital file is perceived as a "shared document" which is distributed to viewers. The invention includes the just-in-time processing of the shared document according to certain viewing preferences submitted by viewers and sending the shared document to one or more remote computers, where the shared document is displayed by a viewer application.
